Product Descriptions:

Blueskin® SA Self-Adhered Air Barrier Membrane is a 40 mil composite SBS membrane consisting of a high strength blue HDPE film and a polymer modified compound core. A release film on the underside of the membrane is removed prior to application. This membrane is an air barrier¹, a vapor barrier² and a highly effective rain barrier³. A primer is first applied to the DensGlass Gold followed by the application of the membrane. Primers are available in both solvent and water based formulations.

Air Bloc 32 is a one component, seamless elastomeric rubber membrane with low volatile organic content and low odor. It can be applied by spray or trowel. This membrane is an air barrier⁴, a vapor barrier⁵ and a highly effective rain barrier⁶. No priming is required. Air Bloc 32 is used in conjunction with Blueskin SA which is used as a transition sheet at the interface of dissimilar materials.

Blueskin® TWF is a 40 mil composite SBS membrane featuring a special yellow, high strength HDPE film and special polymer modified compound formulated specifically for thru wall flashing applications.

Follow membrane manufacturer's installation guidelines and specifications for proper design and use.

G-P Gypsum does not provide engineering services. Proper design and performance criteria provided by other parties.

¹ Air leakage is 0.0001 CFM/ft² @ 75 Pa to ASTM E 283.

² Vapor transmission is 0.05 perms (2.8 ng/Pa.s.m²) to ASTM E 96.

³ Hydrostatic pressure resistance complies with CAN/CGSB-37.58.

⁴ Air leakage is 0.0001 CFM/ft² @ 75 Pa to ASTM E 283.

⁵ Vapor transmission is 0.08 perms (5.0 ng/Pa.s.m²) to ASTM E 96.

⁶ Hydrostatic pressure resistance complies with CAN/CGSB-37.58.
